

Flow Regulators

Product Code 100452

A flow regulator is a component which maintains a predefined constant flow rate independent of the prevailing line pressure. It automatically compensates for pressure variations between 1 and 5.5 bar. Siadaw flow regulators are designed to be used exclusively in clear water applications.

Siadaw offers this water saving product for a large number of applications in taps, showers or kitchens, in private bathrooms, hotels or public toilets: Siadaw water savers ensure that as much water as necessary is used, but as little as possible to provide comfort of use (enough flow) while conserving water.

1/2" M/F - Must be fitted in correct orientation.

- **6 Litre/Minute - Green**
- **8 Litre/Minute - Blue**
- **10 Litre/Minute - Orange**
- **12 Litre/Minute - Red**
